Acknowledgement

This Strategic Plan has been developed through support from Save the children and Sida under the Driving Sustainable Change for Children’s Rights Project. The processes and views expressed in this plan represent Care for Nature Zambia and not that of its partners.

We further extend our thanks and gratitude to His Royal Highnesses Chief Chisunka and Chief Kalaba including their chiefdoms and communities for the role they played in informing the development of this plan. Our thanks go to Government Departments that include Forestry, Child Department, Agriculture, Labor, Health and the mines bureau and Civil Society Organization among them Civil Society for Poverty Reduction, Luapula Families in Distress, Mansa District Land Alliance, Group Focused Consultation and Chandalika for taking part in the process of developing this plan. Many thanks to teachers and children from Chisunka and Kalaba chiefdoms and Chilyapa and Namwandwe wards for participating in the process and the media that include Prime TV and Radio Yangeni that we work hand in hand with in collecting and disseminating information.

Foreword from the Board Chairperson

It is my pleasure to introduce the 5-year strategic Plan for Care for Nature Zambia - CNZ. This strategic Plan is about how we intend to work in an environment which is dynamic but endowed with abundant natural resources, ecosystems yet affected by climate change and increasing habitat loss.

CNZ exists with a vision to create a nation in which “all people care for nature.” The strategic plan has therefore provided framework on how we will work in improving management of natural resources and bettering people’s livelihood in the communities of Zambia particularly in our catchment areas.

We as a board of Care for Nature Zambia, acknowledge that biodiversity plays a critical role in the healthy functioning of our ecosystems and provides an important capital and basis for economic growth. To this regard CNZ will endeavor to ensure that environmental conservation is part of everything we do and inspire and empower people to join us in helping save our environment and natural habitats.

In the next years we hope to see a shift in people’s perception of natural resources. We expect people to start appreciating and taking greater responsibility in conserving our environment and natural resources. This strategic Plan will ensure that the right processes are in place to support us in meeting our responsibilities, and it will enable us to review and evaluate our journey along the way.

May I also take this opportunity to sincerely thank and acknowledge fellow board members, the staff and members of CNZ and our cooperating partners for their commitment and support rendered during the process of developing this strategic plan? It is my sincere hope that we will continue working together to ensure effective and quality implementation of this plan.

Board Chairperson

Introduction

Care for Nature Zambia has developed this five-year strategic plan to reaffirm its commitment to continue promoting nature conservation, human rights and sustainable development in Zambia. We are excited to mention that Care for Nature Zambia has evolved into a child centered organization with a bold vision to promote children’s rights and work together for and with the children to address the many challenges that affect their progression.

Our resolution in this strategic plan is to strongly address the impacts of climate change on children’s rights and promote their participation in decision making and climate change process whilst taking into consideration the interest of other vulnerable groups we work with that include young people, youths, women, persons with disabilities and the aged. Our Nature Conservation Program focus will help us to address issues of climate change, disaster risk reduction and management, humanitarian response and promote sustainable extractives in Luapula and Zambia and large.

This strategic plan therefore provides an overview of how the organization has restructured its thematic operations to incorporate children whilst maintaining its vision and mission and the interest of the communities and beneficiaries previously served.

The plan highlights the development process, a reflection of the previous strategic plan, the vision, mission and objectives of Care for Nature Zambia, areas of operation, our approach, catchment areas and a contextual analysis of the environment in which we operate.

Worthy to note is that this strategic plan has been developed at a time when Zambia has a Ministry dedicated to Environment being the Ministry of Green Economy and Environment and also a significant period in History when the country has finalized and adopted the Children’s Code Act No. 12 of 2022 which places children in a better position to enjoy their fundamental human rights if, the Act is well disseminated and implemented.

The strategic plan also comes at a time when Government has launched the 8th National Development Plan, therefore as an organization that is determined to build resilient livelihoods and prosperous communities through citizen participation in conservation, upholding human rights and good governance, we have aligned our strategic interventions with these important national and international documents.

On behalf of the board, staff and members of Care for Nature Zambia, we would like to extend our sincere gratitude to Save the Children International and Sida who have made this process of developing our strategic plan possible and many thanks to all stakeholders who have contributed to the development of this plan. Please join us as we turn our plan dive into nature-based action for a just, green and prosperous nation!

Strategic Plan development process

This strategic plan was developed through a wide consultative process aimed at creating the best interventions to address climate change and environmental challenges with focus on children and other marginalized and vulnerable groups of society.

Literature review, stakeholder meetings with children and communities, stakeholder consultative meetings and consultations with CNZ board and staff was conducted. The process also helped the organization to align its work with the Eighth National Development Plan, Sustainable Development Goals and national and international frameworks on children, climate change and environment.

Looking back

Our Previous Strategic Plan was developed internally with a strong focus on building the institutional capacity and that of communities to implement environmental conservation and sustainable development programmes. During the period 2018 to 2022, Eight cooperatives were established within Mansa District, six working in the Extractive industry, one Agriculture and the other promoting indigenous seeds, foods and crafts.

The organization through support from United Nations Development Programme conducted action research on women and youth access to development minerals and mining rights in 2018, findings which were used to develop a community action project to strengthen implementation of legal and policy frameworks on mining and environment in Mansa District which was supported by Action Aid Zambia.

From the support given by UNDP and AAZ, Care for Nature Zambia launched the Luapula Mining Insaka in 2019 which further attracted support from other Civil Society Organizations working in the Extractive Industries in Luapula Province among them Caritas Zambia, Diakonia, Transparency International-Zambia, Norwegian Church Aid, Council of Churches in Zambia and Publish What You Pay.

Through an initiative that was first support in 2013 by Civil Society Organization Environment Fund -CSEFI, Care for Nature signed a memorandum of understanding in 2020 with the National Heritage Conservation Commission to manage the Chamalawa Hot Spring and its wetland.

The organization further worked on strengthening its networking with other Civil Society Organizations through membership and some of the Networks to which the organization is affiliated include Civil Society for Poverty Reduction, Zambia Climate Change Network, Community Based Natural Resources Management, Civil Society Organization Environment Hub, Mine Workers Union Women Aiding Women and Mansa District Land Alliance. The networking was further stretched to media which saw Care for Nature Zambia producing a lot of media articles, including on the Tunatazama Community monitor's page.

Through its work in the extractives sector, Care for Nature Zambia discovered the increasing rates of children involvement in mining and this also exposed the gaps in child rights programming and promoting children's rights which led to seeking partnership with Save the Children to address issues of children's rights and the environment.

Lessons Learnt

Care for Nature Zambia has experienced steady growth over the past years and the organization is entering into this new phase with vast experience and renewed energy to take the organization to a higher level of influencing positive change through capacity building programs aimed at empowering beneficiaries to participate in decision making processes.

Through its work in the extractives sector, Care for Nature Zambia

discovered the increasing rates of children involvement in mining and this also exposed the gaps in child rights programming and promoting children's rights which led to seeking partnership with Save the Children to address issues of children's rights and the environment.

Strong working relationships with Government, Traditional leaders, Civil Society Organizations, Children and their communities and the media has helped Care for Nature Zambia to attain a strong voice for the environment, and now the children through advocacy and lobbying.

The organization participated and continues to participate in policy formulation and review processes and with such experience seeks to drive the agenda for children and their communities to participate in similar processes. Creating safe spaces for children and building their capacity to develop child led initiatives is critical to achieving our desired goal of giving children a voice and influencing decision making. Children are change-makers and given an opportunity to equitably participate in decision making processes, they can contribute significantly to raising awareness on environment and climate change and pave way for a more secure and protected future for all.

Care for Nature Zambia has created strong working relationships with the rural poor because of the fight for equality and acknowledging the significant role that local people and knowledge plays in conservation. As an organization we believe that every community wealth is in its natural resources, hence the need to promote community rights to access and utilize natural resources for sustainable livelihoods whilst building their capacities to use and manage the resources sustainably.

Who we are

Care for nature Zambia registration number: ORS/102/46/334 is a not-for-profit non-Governmental, Non-Partisan, Non-tribal and non-religious organization working to promote environmental conservation and sustainable development in the local communities of Zambia. The organization was formed in Mansa District in October 2010 to respond to the rising need and concerns by citizens to conserve our environment and its natural resources for the attainment of social-economic development both for the present and future generations.

Since its inception, Care for Nature Zambia has established partnerships with local communities, traditional leaders, government and Civil Society Organizations and works with communities and learning institutions through cooperatives and conservation clubs. The organization headquarters are in Mansa District of Luapula Province, but the organization operates at National level through its partners and has a district office in Samfya.

Mandate: Care for Nature Zambia believes that conserving our environment and its natural resources is both a basic fundamental human right and responsibility of individual children, youths, women, men and the general public and a strategic response to managing Climate Change, and ecosystems. We believe that collective engagement in Nature Based Actions will help communities to effectively respond to climate change impacts, disasters and get involved in humanitarian response.

Our Identity

We identify ourselves with NATURE as the core focus of our organization. We define NATURE as the physical environment of Earth which encompasses all natural resources (Fauna and Flora) including aquatic and terrestrial ecosystems and landscapes.

- 01

Our Logo symbolizes nature in its simplest form.
- 02

Our identity colors are GREEN and Orange. Green symbolizing nature (fauna and flora) and orange symbolizing humanity and the earth.
- 03

Our Full Name is Care for Nature Zambia, but also identified without including location as Care for Nature.
- 04

Our acronym is CNZ – C for Care, N for Nature and Z for Zambia

Our Role as Care for Nature Zambia

Our Role as Civil Society is to promote conservation, human rights and co-existence among all living species.

Vision

Care for Nature Zambia exists with a vision to create a nation in which “all people care for nature”. We believe that when people care for nature, they can willingly participate in conservation and make better decision towards sustainable development.

Mission

Our mission is to “build resilient and prosperous communities through citizen participation in nature conservation” We believe that communities can create wealth and maintain a safe, clean and healthy environment if they use natural resources responsibly.

Main Objectives

The Organization has the following main object:

- To promote sustainable development through citizen participation in nature conservation
- To promote children's rights and enhance their development through leadership coaching and capacity building programs
- To promote sustainable mining through minimization of negative environmental, economic and social impacts of mining activities in host communities
- To ensure long term resource and financial sustainability for Care for Nature Zambia through resource mobilization and implementation of activities that maintain and improve the organizations assets

Core values

- Human dignity: we shall ensure inclusive and equitable participation in development regardless of race, tribe, religious, political or cultural affiliations.
- Gender equality: we shall promote gender equality in all our programs including equal opportunities for recruitment and promotion of staff based on their qualifications and experience.
- Nobility: honesty, integrity, sincerity and transparency are key to the prosperity and sustainability of the organization hence we shall maintain a zero-tolerance stance against theft, corruption and fraud.
- Quality: quality defines the personality of people who belong to an entity; we shall work towards producing quality work at all times and all management staff and beneficiaries shall be responsible for maintaining quality of project performance.
- Discipline: All staff, beneficiaries and partners of Care for Nature Zambia shall respect and abide by the organizations rules and regulations and shall at all times portray acceptable behavior and commit to the policy procedures and systems of the organization.

Target Groups

Approach Human Rights Based Approach

CNZ will use the Human Rights Based Approach to design and implement its programs for and together with its constituency and target beneficiaries. This approach will help to support and build capacity of citizens to call for just societies where everyone is given equal opportunities to thrive and develop. The approach places emphasis on knowledge and skills transfers and transferring power to the most marginalized for them to equally participate in decision making and development processes.

Zambian Children form much of the population and are mainly affected by both monetary and non-monetary poverty especially in the rural areas. Children’s rights are constantly violated, yet despite having the potential to be change makers, they are often left out and discriminated against participating in key decision-making processes. Traditional practices and cultural beliefs further disadvantages children from fully participating in matters that concern them, further putting children at risk of being cut out of decision making.

Young people like children are inadequately incorporated in decision making processes and they are often considered as youths which make it difficult to address their concerns adequately. From this period comes the Youths who form the majority population of the country, yet suffer from high levels of unemployment, limited education and opportunities which has further contributed to high consumption of alcohol and use of drugs. Women, persons with disabilities and the aged are another group of vulnerable people in society whose rights are constantly violated and left out in decision making processes and the margin is wider in rural areas where women are impacted significantly by negative cultural and social norms.

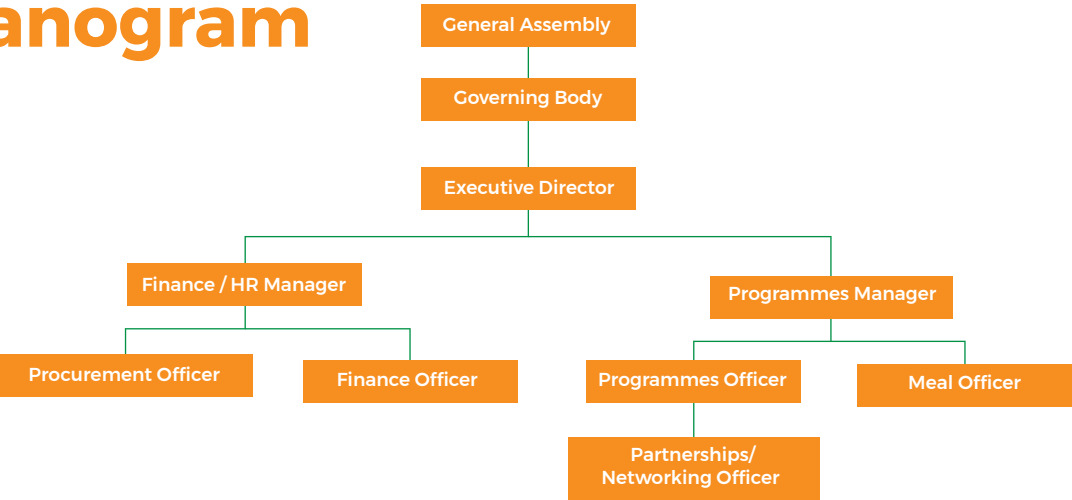

Organization Capacity Development

It is evident that for the strategic work plan’s targets and outcomes to be achieved, both secretariat program staff and board members of Care for Nature Zambia must commit towards team work.

For Board members and potential donors, this means providing overall organizational support and funding to enable the organization achieve targets in its four priority areas and engaging in effective organizational monitoring to assess progress and to guide decision making.

For the Secretariat it means delivering quality service to affected communities by expanding the funding base of the organization, implementing responsive change, management to ensure that programmes are relevant and viable, and working in partnership with other organizations and stakeholders that collaborate and support the identified strategic priority areas of Care for Nature Zambia.

Organogram

Where we work

Care for Nature Zambia has its headquarters in Mansa District of Luapula Provinces and currently works in Mansa, Samfya and Mwense District. The organization has a national reach through its network and by 2027 envisions reaching out to all ten provinces through school clubs which will be operated in collaboration with the Ministry of Education, Ministry of Community Development and Social Services and Ministry of Green Economy and Environment.

CNZ operates in all 10 Provinces of Zambia through its networks partner networking but has its headquarters in Mansa and focal point person operating in Samfya, Kitwe and Lusaka.

Contextual Analysis

Natural Resources both renewable and non-renewable and ecosystems play a dominant social, economic and political role in most countries around the world. They are a natural capital out of which other forms of capital and wealth are made. They contribute towards fiscal revenue, income and poverty reduction. Natural resource dependent sectors provide jobs and are often the basis of livelihoods for grass root communities. In Zambia, the environment plays a significant role in the development of the country and people’s livelihoods especially in the rural areas.

Unfortunately, despite the significant role that natural resources play in driving the development agenda of the country, unsustainable utilization, over exploitation and non-compliance to legal and policy frameworks has placed most natural resources at the verge of depletion, increased environmental problems such as pollution and land degradation and exposed communities to various environmental hazards and climate injustices.

The influx of investors in environmental driven sectors such as forestry, wildlife and mining, disadvantages the rural poor from accessing meaningful benefits from natural resources which are found within their communities and further the processes of attaining licenses disadvantages them from accessing these natural resources in a legal manner.

Inadequate capacity building among community members has resulted to many other challenges aside illegal harvesting and extraction of raw materials but violation of human rights including the rights of children to live in a safe, clean and healthy environment. Limited information, communication, education and financing has left children and their communities highly vulnerable to impacts of climate change and environmental problems and this has been worsened by inadequate transparency and accountability in the management of natural resources and low commitment to fulfilling and respecting people’s rights.

Theory of Change

In order to promote sustainable use of natural resources and enjoyment of fundamental human rights, people need to understand the significant role that natural resources play in sustaining livelihoods and supporting healthy functioning of ecosystems, and that each person regardless of status, race, tribe, political, religious, cultural affiliation or physical being is born with rights which are inherent and inalienable, hence it is the duty of Government and all persons to enjoy that no one's rights are violated.

Care for nature Zambia has a challenging role to balance community rights to equitably access and utilize natural resources for livelihoods whilst promoting sustainable use and management of the natural resources. This central role of balancing consumption and conservation places Care for Nature Zambia at the center of Government being the policy implementers and communities who are the real custodians of the resources.

In order to achieve a just and equitable nation in which all people care for nature, the organization brings together all stakeholders to help each one understands their roles and responsibilities, and promote their participation in conservation for the attainment of resilient livelihoods.

Thematic Areas

Care for Nature Zambia's work focus in the next five years are as follows:

01 Nature Conservation Program – NCP

Nature Conservation is the care and protection of the Earth's natural resources for the benefit of the present and future generations. Our conservation efforts focus on protecting species from extinction, maintaining and restoring habitats, enhancing ecosystem services and protecting biological diversity. Our goals under the NCP include: Restoring and maintaining habitats, maintaining species diversity and genes, managing and maintaining ecosystems, preventing wasteful use of natural resources and promoting conservation through various social institutions. Under the NCP, we will work with stakeholders to protect and sustainably manage natural resources that water, air, land, forests, wildlife, fisheries and minerals; and to take action to combat climate change and its impacts.

We believe that when natural resources are sustainably managed communities can generate wealth to reduce poverty and attain an adequate standard of living. When natural resources are not well managed, communities face environmental and climate challenges which exposes them to various threats and vulnerabilities and as such, this program area will address climate change and environmental challenges in line with SDG 12, 13 and 15 including legal and policy frameworks on Environment and Climate change at National, Regional and Global Level.

we shall engage with policy makers and stakeholders to ensure implementation of policies that promote sustainable use of natural resources. We shall increase awareness on natural resource management and nature-based solutions through community and stakeholder engagements, mass media programs and advocacy and social accountability programs. We shall build capacities of communities to sustainably manage natural resources through clubs and cooperatives for sustainable economic development.

Our Action and Change we hope to see

- Increase Education, awareness and sensitization on Environment and Climate change among stakeholders through community engagement meetings, trainings, workshops, seminars and mass media, including publications, policy briefs and position papers.
- Conduct Capacity building programs for school and community-based conservation clubs to enhance climate resilience and implementation of projects that contribute to sustainable development.
- Promote inclusive participation of citizens in Environment and Climate Change policy processes and provide technical support to stakeholders on environment and climate change related programs.
- Collaborate with stakeholder to promote eco-tourism to enhance green jobs and community development.
- Conduct research and development on environment and climate change to increase and improve knowledge in the sector which will enable stakeholders to make informed decisions and take appropriate actions.

02 Child Rights and Development Program - CRDP

Our focus under this thematic area is to promote children's rights and enhance their development through leadership skills. The program will address structural barriers that prevent or limit children from enjoying their fundamental human rights and norms that expose them to abuse and violence.

This program area is aligned to SDG 4 and 5 and will also address SDG 1, 2 and 3 as children are mostly affected by poverty, hunger and low nutrition. We will engage with Government and stakeholders on the rights of children and strengthen child participation in decision making processes with focus on environment and climate change. We shall promote child led initiatives, advocacy and social accountability including research and reporting to the UN through the Universal Periodic Review process.

Children will take the lead in ensuring justice, equality and access to social protection and protection from all forms of abuse and violence.

Our Action and Change we hope to see

- Conduct Capacity building programs to improve participation of children in decision making processes at all levels including climate change processes.
- Promote child led initiatives to enable children take lead in championing their rights and ensure a just and safe society for children and their communities.
- Collaborate with children to conduct advocacy, lobbying and social accountability programmes which will lead to increased public investment in children.
- Collaborate with children to conduct research and development on children's rights and development in order to facilitate informed decisions and actions.

03 Sustainable Mining Program -SMP

Sustainable mining refers to the minimization of negative environmental, economic and social impacts of mining activities and the limitation of extraction rate that will not compromise the potential needs of future generations. Increased demand for mineral resources puts substantial pressure on energy and water resources required for extracting metals. In addition, the increased pollution caused by the extraction process negatively impacts the environment and affects communities living in the mining areas. Resources such as land, water, vegetation and forests are also negatively affected by mining hence this program area will focus on promoting sustainable mining and adherence legal and policy frameworks relating to mining.

The organization will work with stakeholders to ensure compliance to Environmental protection requirements such as Environmental Impact Assessments/Project Briefs and compliance to Environmental protection fund, labor and social security and child protection based on the Children's rights and Business Principles model.

The organization will mobilize and train communities to monitor compliance by stakeholders to legal and policy frameworks and will also train and build capacities of communities to engage in sustainable mining across the value chain through cooperatives and also take part in restoration and reclamation projects that include tree planting. The organization will continue to hold and participate in local, national, regional and international mining indabas, conferences and trainings to enhance partnerships and transformative extractives and respond to SDG 8, 11, 16 and 17.

Our Action and Change we hope to see

- Conduct Capacity building programs to improve mining practices among stakeholders that contribute to sustainable economic development.
- Collaborate with stakeholder to strengthen partnerships and networks in the mining sector at local, Provincial, National, Regional and International Level.
- Conduct stakeholder engagements to increase adherence to legal and policy frameworks on mining, environment, labor and social security, adopt Environment Social Governance and develop Management plans that will contribute to reclamation of degraded land.
- Conduct research and development on mining and its value chains to increase and improve knowledge in the sector which will enable stakeholders to make informed decisions and take appropriate actions.

04 Organization Development Program - ODP

This program focuses on building the organizational capacity for Care for Nature Zambia to implement its mandate. The organization will address organizational systems and policies, human resource, governance, finance, programmes, operation, communication, resource mobilization and external relationships. The program will also address the organizations constituency and beneficiaries and plan on expansion from local to national and regional partnerships.

Our Action and Change we hope to see

- Conduct Capacity building programmes to improve and strengthen the institutional capacity for CNZ to effectively implement its Mandate.
- Implement Social Enterprises and Resource Mobilization programmes to strengthen the human and financial resources of the organization.
- Collaborate with stakeholder to strengthen partnerships and networks in the Environment, Climate Change and Human Rights and Development Sectors.
- Conduct research on Organization Governance and operations of Non-Governmental Organizations to help the organization operate effectively with the paradigm shifts and in compliance with legal and policy framework aligned to NGO operations.

Organization Commitment

Care for Nature Zambia is determined to implement this strategic plan during the proposed 5 years running from 2023 to 2027. However, we appreciate the fact that implementation of the plan requires both human and financial resources, together with improved information, communication and technology skills and infrastructure; therefore, we shall diligently work towards mobilizing the required resources to ensure proper and timely implementation of all the proposed activities.

CNZ draws its strength and owes its existence to its cooperating partners coming from various backgrounds who are committed to ensuring that our environment and its natural resources are safe guarded for the present and future use. During our five-year journey, we expect our members who include communities and learning institutions to participate actively in the implementation of the activities proposed in this plan.

Communities and learning institutions will be encourage to form cooperatives and clubs and to develop project proposals and initiatives that will enable them to establish networks, partnerships and mobilize resources to sustain their work. Our approach to undertake projects at grass root through cooperatives and clubs will ensure local resource mobilization and utilization by the local communities and learning institutions.

Table 2: Care for Nature Zambia 2023-2027 Five Year Budget Summary

1.1 Table 2 Indicative Budget

UNITS	DONOR FUNDING	USD
